Floor Convectors

PKN, PKF, PKV, PKH, PKH-4C

Air treatment

Version 1.0.4
Date: 12.11.2025.

Floor Convectors

Application

Perfect for use in areas with high interior design requirements and spaces with large glass surfaces. Attractive solution used both as a primary heating or secondary cooling source depending on application of space.

Advantages

Steel sheet casing powder coated in black color - RAL9005.
Optional external 6 mm tick insulation.
Cu/Al heat exchanger with profiled fins and 1/2" internal thread connections; each tested on 25 bar max pressure.
Low noise tangential fans: 230V AC or 24V EC.
Wide range of attractive cover grilles made of anodized aluminium, wood or stainless steel in longitudinal or transverse roll-up design.
Modular design allows easy connection and section adjustments.

Attractive design

Compared to classical heating systems, floor convectors are not using up usefull space nor interfering with room arrangement.
Variety of accessories, regulation and inactive connection parts.

Cutting through the cold air flow

In spaces with large glass surfaces on external openings, there is a "spillover" of cold air from the glass surface into the interior of the room (cold wall effect). Floor convectors cut through the cold air flow, creating a warm barrier directly in front of the window surface on one side, and a vertical flow of warm air on the other side. This increases the comfort of staying in such spaces while simultaneously preventing the windows from fogging.

Instant heating

Heat exchangers provide rapid heat transfer due to large heat exchange surface. It is especially beneficial in combination with slow heating systems.

High heat output at low input water temperatures

In heating systems with low water temperatures, floor convectors with forced convection are used. The principle of forced convection greatly increases heat output.

Cost effective

As an addition to floor heating system, floor convectors are great solution for short-term heating requirements during transitional periods between seasons. In this way heating is only delivered when neccessary, avoiding unwanted heat transfer and saving money.

PRODUCT OVERVIEW

Clasical heating systems

Klimaoprema floor convector

PKN Floor convector

Natural convection is used for heat transfer from heating element to the surrounding air. Cold air is heavier and falls to the bottom of the casing. Air is then heated by a heat exchanger. As it gets warmer, it rises, and leaves the room for new cold air to fill the casing.

Length: 1000 to 3000 mm
Height: 70, 110 or 140 mm
Heat output: 66 - 2570 W
Heat exchanger: 1-row, 2-rows, 3-rows

HEAT OUTPUT PKN

PKF Floor convector

Forced convection is achieved by using a built in fans to increase the airflow over heating surfaces, thus greatly improving heat transfer efficiency.

Length: 1200 to 3000 mm

Height: 110 or 140 mm

Heat output: 57 - 7360 W

Heat exchanger: 1-row, 2-rows, 3-rows

Fans / Controls
230 V AC - 3 speed transformer
230 V AC - control 0-10 V
24 V EC - control 0-10 V

HEAT OUTPUT PKF-140

PKH Floor convector

2-pipe system for heating or cooling.
Condensate drain included.

Length: 1200 to 3000 mm
Height: 130 or 150 mm
Heat output: 1105 - 13006 W
Cooling output: 406 - 4757 W

Fans / Controls
230 V AC - 3 speed transformer
230 V AC - control 0-10 V
24 V EC - control 0-10 V

HEAT OUTPUT PKH

PKH-4C Floor convector

4-pipe system for heating and/or cooling. Condensate drain included.

Length: 1200 to 3000 mm
Height: 130 or 150 mm
Heat output: 941 - 9181 W
Cooling output: 440 - 4439 W

Fans / Controls
230 V AC - 3 speed transformer
230 V AC - control 0-10 V
24 V EC - control 0-10 V

HEAT OUTPUT PKH-4C

PKV Floor convector

Version for heating of damp areas (swimming pools, winter gardens etc.). Natural or forced convection. Special 12V crossflow fans (power supply unit has to be provided outside of the floor convector). Unique casing design with water drain and dividing rack.

Length: 1000 to 3000 mm
Height: PKV-N 110, 140 or 170 mm
 PKV-F 140 or 170 mm
Heat exchanger: 1-row, 2-rows, 3-rows
Fans / Controls: 12 V AC

WIRING DIAGRAMS

Connecting multiple convectors with one thermostat

- Relay plate UA-AT6-RB
- Number of relay plates is equal to number of autotransformers that control the group of convectors
- Power supply, motors and thermal valve actuators are connected to relay plate
- Relay plate is placed together with the autotransformer in the junction box
- If thermostats Thermokon LCF or RDF 600T are used, connection of the relay plate is necessary

WIRING DIAGRAMS

Floor convector selection

For given height and width of glass surface, heat transfer coefficient K and outside temperature, we can calculate convector selection parameters.

Example:

- from diagram 1, $\Delta t_L = 7$ K
- from diagram 2 cold air velocity $v_L = 0,36$ m/s
- from diagram 3 airflow rate, $V_L = 52$ m³/h

To prevent cold air intrusion in room, necessary heat output per meter length is determined by:

$$Q_{\text{convector}} > Q_{\text{falling air}}$$

$$Q_{\text{falling air}} = \frac{V_L \cdot c_L \cdot b \cdot \Delta t_L \cdot \rho}{3600}$$

Inserting known values

$V_L = 52$ m³/h
 $c_L = 1,006$ kJ/kgK
 $b = 1$ m (glass width)
 $\Delta t_L = 7$ K
 $\rho = 1,2$ kg/m³

$$Q_{\text{falling air}} = 0,122 \text{ kW}$$

In accordance with result above, a floor convector with minimal length of 1m and minimal heat output of 0,122kW can be selected.

Diagram 1: Temperature difference of glass surface, at room temperature 20 °C

Diagram 2: Cold air velocity

Diagram 3: Determining airflow rate [m³/h]

DIAGRAMS

Floor convector standard delivery

Steel and aluminium parts
powder coated in RAL 9005

Standard U frame

Silent 230V AC or 24V EC tangential fans
(forced convection models)

Service cover

Leveling screws

Leveling mounts for height
adjustment and casing fixing

Efficient low volume heat exchanger
with bleed valve 1/4"

Ground terminal

Air valve on heat exchanger

PVC foil and carton box packaging with
polystyrene corner and side protection

Installation and operation manual

Protective plywood cover

MAINTENANCE

AIR TREATMENT

TRANSPORT

After arrival, check the product for transport damage and shortcomings. In case of any damage or shortcomings, immediately contact your supplier.

STORAGE

If the product is not installed immediately:

- Remove any wrapping.
- Protect product from dust and contamination.
- Do not expose the floor convector to the effects of weather, store it in a dry place.

Please properly dispose of packaging material!

MAINTENANCE AND OPERATION

Klimaoprema products are designed as such do not require cleaning and regular maintenance. However, mechanism should be systematically cleaned for proper operation.

- Provide a systematic cleaning of dust
- Cleaning instruction: clean with a sponge, with water or a mild detergent

COMMISSIONING

Carefully unpack the product, be cautious of sharp edges and do not use excessive force for unpacking.

- Inspect the floor convector and check for any damage
- Ensure that the devices have been correctly installed
- Before commissioning: check the product functions
